

PRESS RELEASE

The ColliCare Logistics Group significantly reduces emissions

Gdynia, September 2022

ColliCare, the Norwegian logistics company which opened office in Poland in January this year, reported they reduced their emissions in transporting goods by 29% since the reference year of 2017. Also, the company aims to cut emissions by 55% by 2030. The goal is in line with Science Based Targets, the Paris Agreement, and the goals of the Norwegian government.

How do they do this?

ColliCare is a company that strives to reduce pollution for the sake of the environment. They cooperate closely with their clients, finding the most emission-cutting and reliable solutions for different transportation needs and routes.

The whole group aims to move transportation from road to sea, which is much greener solution, when it comes to CO₂ emissions. They are also very focused on the use of electric railways in Europe, biofuel and electric trucks where possible.

The dedicated department works on measuring emissions

ColliCare has developed dedicated department of experts in collecting data, calculating emissions, and visualizing results in graphs, tables, and reports. Emission computations calculate the direct and indirect output of greenhouse gas (GHG) and carbon dioxide emissions committed by an individual, organization, product, or event. It helps to recognize excessive energy usage or other inefficiencies which result in operating cost reduction, boost brand credibility, and preserve the environment.

Green logistics strategy for Poland

- This is also our strategy for Poland. – says Jesper Hansen, Managing Director in Poland. – We bring our experience from the Nordic markets to Poland to offer our clients greener alternatives for their logistics processes. This is how we build our offer on the Polish market, especially when it comes to exports from Poland to Norway and the Nordics. We use less-emission sea transport, and, for instance, in the Oslo area, we can deliver loads even with 100% electric vehicles.

About ColliCare Logistics:

ColliCare Logistics was founded in 2007. It is one of the largest in its industry in Norway and is developing dynamically towards smart logistics and environmentally friendly solutions. The company has 600 employees, with offices in Sweden, Norway, Denmark, Finland, the Netherlands, Latvia, Lithuania, Italy, Turkey, India, China and Poland. The company is strongly focused on green logistics services. ColliCare was awarded the EcoVadis gold medal for its actions for sustainable development. Company also takes part in the Green Shipping Program to establish the world's most efficient and environmentally-friendly shipping.
